Summary

Full-Stack Software Engineer with 3+ years of experience building **scalable, high-performance** microservices and AI-powered applications using React.js, Node.js, and Python. Experienced in **backend architecture, REST APIs, cloud-based solutions, distributed data processing, and performance optimization**. Strong track record of delivering reliable, maintainable, and production-ready software while solving complex engineering challenges.

Technical Skills

- Languages : JavaScript, TypeScript, Java, Python, SQL
- Backend : Node.js, Express.js, Sails.js, Django, REST APIs, Microservices
- Frontend : React.js, Next.js, HTML/CSS, MUI, React-strap
- AI/LLMs : RAG Pipelines, Agentic AI, Prompt Engineering, Vector Databases, GPT, Claude
- Databases : MongoDB, MySQL, Redis
- Cloud & DevOps: AWS (S3, SES, SNS), Docker, Jenkins, Git, Linux, Bitbucket, CI/CD
- Core Concepts : System Design, Distributed Systems, Caching, Performance Optimization, Streams, Third-Party API Integration

Experience

Interlinkages India Pvt. Ltd. (Credence Data)

Gurugram, Haryana

Software Developer

Aug 2025 – Present

- Architected and implemented a configurable multi-region document management platform, dynamically routing customer documents to region-specific AWS S3 buckets based on entity configuration, ensuring secure, scalable, and compliant storage.
- Developed a configurable evaluation platform that transformed a manual spreadsheet-based workflow into an automated process, reducing report generation time from **2 hours to under 10 seconds**.
- Engineered a memory-efficient Node.js stream-based data ingestion pipeline capable of processing GB-scale CSV datasets with in-flight concurrency mechanism, backpressure mechanism, retry mechanisms and automated scheduled execution.
- Designed scalable backend architectures and developed high-performance REST APIs using Node.js, Express.js, and Sails.js.
- Optimized backend performance through MongoDB aggregation tuning, indexing, caching, and streaming, reducing API latency and eliminating redundant processing.
- Integrated third-party REST and SOAP APIs services by implementing resilient authentication, validation, retry mechanisms, and standardized error handling.
- Developed scheduled background jobs for data synchronization, report generation, email delivery, and large-scale batch processing.
- Monitored production services using AWS CloudWatch, New Relic and application logging, investigated production incidents, performed root-cause analysis, and implemented preventive fixes to improve service reliability.

Fairassets Technologies India Pvt. Ltd.

Gurugram, Haryana

Software Developer

Jul 2023 – Aug 2025

- Integrated DigiLocker and Karza APIs to automate customer identity and PAN verification, streamlining onboarding workflows.
- Engineered a high-performance Node.js streaming pipeline to ingest **80+ cr** records from 814 files using constant memory.
- Designed and developed scalable REST APIs supporting payment processing, EMI management, foreclosure, SOA, credit reports, search, and customer profile management.
- Built React.js and Next.js administrative dashboards, improving operational efficiency for internal business teams.
- Optimized frontend performance using React Hooks, reducing unnecessary re-renders by **50%** and improving page load time.
- Implemented Redis caching, improving application performance by **40%** while reducing database load.
- Developed CKYC integration with automated search, download, upload, and fallback workflows for unmatched customer records.
- Designed a Red Flag Alert System to identify suspicious activities and automatically notify internal teams through email alerts.

Fairassets Technologies India Pvt. Ltd.

Gurugram, Haryana

Software Developer Intern

Jan 2023 – Jul 2023

- Developed and optimized RESTful APIs using Node.js, improving data handling and reducing response time by **10%**.
- Enhanced API response time by **50%** by optimizing database queries and implementing JavaScript’s Promise APIs.
- Designed and constructed a robust and scalable AWS SNS webhook and dashboard in PHP for tracking emails.
- Created and implemented Agreement and NOC PDF templates to streamline loan process documentation.
- Developed an EMI Collection Dashboard and APIs for the internal team with CRUD operations.

Projects

DocMind AI [GitHub | Live]

TypeScript, Prisma, PostgreSQL, Next.js, Express.js, Node.js, pgvector, OpenAI, Ollama

- Developed a full-stack AI-powered document intelligence platform (RAG-based) enabling users to upload documents and ask context-aware questions through AI chat.
- Implemented document chunking, vector embeddings, similarity search, and contextual LLM responses using PostgreSQL / pgvector.
- Built JWT authentication, document management, chat sessions, profile/settings, upload processing, and responsive interfaces.
- Designed a provider-agnostic AI architecture supporting OpenAI and Ollama through environment-based configuration.
- Deployed the application using Vercel and Render, with PostgreSQL-backed production persistence.

E-Commerce [GitHub |]

TypeScript, MongoDB, Express.js, Next.js, Node.js

- Developed a full-stack e-commerce platform with secure authentication, role-based authorization, and scalable REST APIs.
- Implemented product, order, inventory, and user management modules with optimized database operations and reusable backend.
- Integrated JWT authentication, Firebase, Redux, and Chart.js to provide secure access control and real-time business insights.
- Designed responsive UI using React.js and Vite while following component-driven architecture and modern frontend best practices.

Education

Department of Computer Science, University of Delhi

New Delhi, India

Master of Computer Applications (MCA) — CGPA: 8.088

Aug 2020 – Jul 2023

Birla Institute of Technology, Mesra (Patna Campus)

Patna, India

Bachelor of Computer Applications (BCA) — CGPA: 8.06

Jul 2017 – Aug 2020
